- ACS
- WRAS
- NSF
- DM 174/04
- FDA

Mechanical seal for large-series cold water pumps, produced in millions of units per year. The BT-AR owes its success to the wide range of application, the short axial length (this allows for more economic pump construction and saves material), and the best quality/price ratio. The elasticity of the bellows design enables a more robust operation.

The BT-AR can also be used as a multiple seal in tandem or back-to-back arrangement when the product media cannot ensure lubrication, or when sealing media with a higher solids content. Installation proposals can be provided upon request.

### BT-PNL

The small outer diameter of the BT-PNL allows installation in small seal compartments. Easy to assemble, the BT-PNL guarantees a long service life due to good product turbulence and the torque transmitted by the rubber bellows.

### BT-PN and PNL, double seal (back-to-back arrangement)

Both types of seal can also be used as a multiple seal in back-to-back arrangement. This is advisable when the product media cannot ensure lubrication or the solids content is too high (oil chamber). Installation proposals can be supplied upon request. In this configuration, the operating pressure (product side seal) must be limited to max. 2 bar (29 PSI).

# BT-PNT

The main design features of the BT-PNT are the metal joint torque transmission together with the rubber bellows. This prevents torsional effects on the bellows. The shaft is protected across the entire seal length. Easy to assemble, the BT-PNT guarantees a long service life due to good product turbulence.

## Features

- Rubber bellows mechanical seal
- Unbalanced
- Single spring
- Independent of direction of rotation

## Operating range (see note on page 28)

Shaft diameter:  $d_1 = 15 \text{ mm}$ , 5/8", 3/4", 1"

Pressure:  $p_1^* = 12 \text{ bar}$  (174 PSI)

Temperature:  $t^* = -20 \text{ °C} \dots +120 \text{ °C}$  (-4 °F... +248 °F)

Sliding velocity:  $v_g = 10 \text{ m/s}$  (33 ft/s)

\* Dependent on medium, size and material

The BT-FN combines a spring loaded ceramic seal face and the traditional pusher mechanical seals. The competitive price and the wide range of applications have made the BT-FN seal a success. The seal is produced with punched metal parts that allow an economical design.

BT-FN mechanical seals are also the ideal solution for light chemicals media applications. To ensure the best reliable performance, we recommend a material combination of hard material sliding faces and proper elastomer O-Rings.

### BT-FH.NB DV

The BT-FH.NB DV is a variant of the BT-FH.NB with a vertical pin for torque transmission in the conical spring. Same installation length as BT-FH.NB, in accordance with EN 12756 ( $L_{1NB}$ ).

## Seat alternatives

Seat ring can be supplied with short tail or with pin to block the seat and prevent seat rotation.

# BT-C5E

The BT-C5E is designed for external mounting and is characterized by a short installation length. The advantage of a seal mounted on the outside is that all metal parts, including springs, are not in contact with the media. Torque transmission via robust axial notches on the metal collar. The collar is fixed on the shaft with set screws. Typical applications are volumetric lobe pumps for food, cosmetics and pharmaceuticals and for sticky and highly viscous media (e.g. paste, paints).

## Features

- Single pusher-type seal
- Multiple springs
- Independent of direction of rotation
- External mounting
- For high viscosity media

## Operating range (see note on page 28)

Shaft diameter:  $d_1 = 20 \dots 80 \text{ mm}$  (0.79" ... 3.15")  
 Pressure:  $p_1^* = 12 \text{ bar}$  (174 PSI)  
 Temperature:  $t^* = -35 \text{ °C} \dots +180 \text{ °C}$  (-31 °F ... +356 °F)  
 Sliding velocity:  $v_g = 15 \text{ m/s}$  (49 ft/s)

\* Dependent on medium, size and material

## Materials (see fold-out page 28)

Seal face: Carbon graphite antimony impregnated (A), Carbon graphite resin impregnated (B), Tungsten carbide (U), PTFE reinforced (Y1)  
 Seat: Aluminium oxide (V), Silicon carbide (Q1), CrNiMo steel (G), Tungsten carbide (U)

# BT-C8

The BT-C8 mechanical seal range is designed for universal application and is ideally suited for standardization. The seal is bi-directional, unaffected by the direction of shaft rotation and is positively driven by set screws. With super-sinus spring. The advantages of this mechanical seal are the easily interchangeable seal faces which permit all material combinations.

## Features

- Single pusher-type seal
- Unbalanced
- Independent of direction of rotation
- Super-sinus spring
- Short installation length, according EN 12756 ( $L_{1KU}$ ).

## Important note

All the technical specifications are based on extensive tests and our many years of experience. However, the diversity of possible applications means that they can serve as guide values only.

It should be noted that the extremal values of each operating parameter cannot be applied at the same time because of their interaction. Furthermore, the operating range of each specific product depends on the respective shaft diameter, materials used, mode of operation and on the medium to be sealed.

A guarantee can only be given in the individual case if the exact conditions of application are known and these are confirmed in a special agreement. When critical conditions of operation are involved, we recommend consulting with our specialist engineers.

Subject to change.
